Notes: Version 1.0 refers to the original results using FMM; Version 2.0 refers to the updated results using Dijkstra. Differences are computed as ($version_1 - version_2$) for each origin–destination pair (upper triangle only). Percentage differences are computed as $\frac{version_1 - version_2}{version_1}$.

Table 2: Summary statistics of travel time by year for rail and HSR passengers, version 1.0 vs 2.0

Notes: Version 1.0 refers to the original results using FMM; Version 2.0 refers to the updated results using Dijkstra. Differences are computed as $(version_1 - version_2)$ for each origin–destination pair (upper triangle only). Percentage differences are computed as $\frac{version_1 - version_2}{version_1}$.

Table 3: Summary statistics of travel time by year for highway and national road, version 1.0 vs 2.0

Notes: Version 1.0 refers to the original results using FMM; Version 2.0 refers to the updated results using Dijkstra. Differences are computed as $(version_1 - version_2)$ for each origin–destination pair (upper triangle only). Percentage differences are computed as $\frac{version_1 - version_2}{version_1}$.

Table 4: Year-on-year summary statistics of travel time for rail and HSR goods, version 1.0 vs 2.0

Notes: Version 1.0 refers to the original results using FMM; Version 2.0 refers to the updated results using Dijkstra. Differences are computed as $(version_{1,t-1} - version_{1,t}) - (version_{2,t-1} - version_{2,t})$ for each origin–destination pair (upper triangle only). Percentage differences are computed as $\frac{(version_{1,t-1} - version_{1,t}) - (version_{2,t-1} - version_{2,t})}{version_{1,t-1} - version_{1,t}}$. The YoY correlations for 2015–2016 and 2016–2017 are not reported because the Version 1.0 travel-time matrices are identical over 2015–2017; consequently, the Version 1.0 YoY-change vector is constant (zero standard deviation), and the correlation is therefore undefined.

Table 5: Year-on-year summary statistics of travel time for rail and HSR passengers, version 1.0 vs 2.0

Notes: Version 1.0 refers to the original results using FMM; Version 2.0 refers to the updated results using Dijkstra. Differences are computed as $(version_{1,t-1} - version_{1,t}) - (version_{2,t-1} - version_{2,t})$ for each origin–destination pair (upper triangle only). Percentage differences are computed as $\frac{(version_{1,t-1} - version_{1,t}) - (version_{2,t-1} - version_{2,t})}{version_{1,t-1} - version_{1,t}}$.

Table 6: Year-on-year summary statistics of travel time for highway and national road, version 1.0 vs 2.0

Notes: Version 1.0 refers to the original results using FMM; Version 2.0 refers to the updated results using Dijkstra. Differences are computed as $(version_{1,t-1} - version_{1,t}) - (version_{2,t-1} - version_{2,t})$ for each origin–destination pair (upper triangle only). Percentage differences are computed as $\frac{(version_{1,t-1} - version_{1,t}) - (version_{2,t-1} - version_{2,t})}{version_{1,t-1} - version_{1,t}}$.

Notes: Version 1.5 refers to the updated results using FMM; Version 2.0 refers to the updated results using Dijkstra. Differences are computed as $(version_{1.5} - version_2)$ for each origin–destination pair (upper triangle only). Percentage differences are computed as $\frac{version_{1.5} - version_2}{version_{1.5}}$.

Notes: Version 1.5 refers to the updated results using FMM; Version 2.0 refers to the updated results using Dijkstra. Differences are computed as $(version_{1.5,t-1} - version_{1.5,t}) - (version_{2,t-1} - version_{2,t})$ for each origin–destination pair (upper triangle only). Percentage differences are computed as $\frac{(version_{1.5,t-1} - version_{1.5,t}) - (version_{2,t-1} - version_{2,t})}{version_{1.5,t-1} - version_{1.5,t}}$.

Table 11: Year-on-year summary statistics of travel time for rail and HSR passengers, version 1.5 vs 2.0

Notes: Version 1.5 refers to the updated results using FMM; Version 2.0 refers to the updated results using Dijkstra. Differences are computed as $(version_{1.5,t-1} - version_{1.5,t}) - (version_{2,t-1} - version_{2,t})$ for each origin–destination pair (upper triangle only). Percentage differences are computed as $\frac{(version_{1.5,t-1} - version_{1.5,t}) - (version_{2,t-1} - version_{2,t})}{version_{1.5,t-1} - version_{1.5,t}}$.

Figure 1: Time-Difference Percentiles
